Mouse Fc gamma RIV/CD16-2 Protein

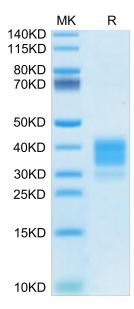

Recombinant Mouse Fc gamma RIV/CD16-2 Protein is expressed from HEK293 with His tag at the C-Terminus. It contains Gly21-Gln203.
The protein has a predicted MW of 22 kDa. Due to glycosylation, the protein migrates to 32-43 kDa based on Bis- Tris PAGE result.
Less than 1EU per μg by the LAL method.
> 95% as determined by Bis-Tris PAGE
> 95% as determined by HPLC
ge
Lyophilized from 0.22µm filtered solution in PBS (pH 7.4). Normally 8% trehalose is added as protectant before lyophilization.
Centrifuge the tube before opening. Reconstituting to a concentration more than 100 μg/ml is recommended. Dissolve the lyophilized protein in distilled water.
-20 to -80°C for 12 months as supplied from date of receipt80°C for 3 months after reconstitution.Recommend to aliquot the protein into smaller quantities for optimal storage. Please minimize freeze-thaw cycles.

FcgammaRIV is a relatively new IgG Fc receptor (FcgammaR) that is reported to contribute to the pathogenesis of autoimmune diseases. FcgammaRIII and FcgammaRIV are each essential to trigger an FcRgamma-linker for activation of T-cell-dependent signal that drives C5a production in the Arthus reaction. A combined requirement for FcgammaRIII and FcgammaRIV in autoimmune injury, and identify the linker for activation of T cells adaptor as an integral component of linked FcgammaR and C5a anaphylatoxin receptor activation to generate inflammation.

Assay Data

Background

Bis-Tris PAGE

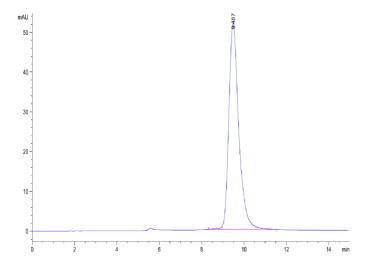

Mouse Fc gamma RIV on Bis-Tris PAGE under reduced condition. The purity is greater than 95%.

SEC-HPLC

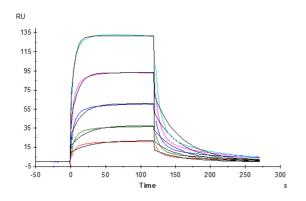

Assay Data

The purity of Mouse Fc gamma RIV is greater than 95% as determined by SEC-HPLC.

SPR Data

Mouse Fc gamma RIV, His Tag captured on CM5 Chip via anti-his antibody can bind Anti-CD3 Antibody with an affinity constant of 146 nM as determined in SPR assay (Biacore T200).
